Report Overview

Zeolite molecular sieves have regular pore structure and uniform pore size. The zeolite molecular sieves can be used to prepare zeolite molecular sieves to achieve high precision separation of different components. At present, NaA molecular sieve membrane has been industrialized. However, because of the low Si/Al ratio of NaA molecular sieve (Si/Al=1), NaA molecular sieve membrane is only suitable for the separation of near-neutral solvent systems. CHA molecular sieve is a three-dimensional octet ring channel structure, with an effective pore diameter of 0.38nm and an adjustable silica to aluminum ratio of 2-?. Since CHA molecular sieve membrane is easy to form heterocrystals in the preparation process, which affects the flux, stability and preparation repeatability of the membrane, large-scale industrial application has not yet been formed. How to prepare low cost, high flux and high stability CHA molecular sieve membrane is the key to realize its industrial application.

The global CHA Zeolite Membrane market size was estimated at USD 6 million in 2023 and is projected to reach USD 8.44 million by 2030, exhibiting a CAGR of 5.00% during the forecast period.
