## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Chain Combination Sling competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Chain combination slings are composed of high-strength alloy steel chains and various end connectors (such as hooks, eyes, ring chains, short links, connecting rings, adjusters, etc.) in a certain configuration. They have extremely high tensile strength, wear resistance and high temperature resistance. Chain combination slings are flexible and can be configured as single-leg, double-leg, three-leg or four-leg lifting forms, and allow for quick replacement or adjustment of lifting methods on site. Its unique adjustability and impact resistance make it perform well in the lifting of heavy irregular objects. Compared with wire rope slings, chain slings are more durable, have a longer service life, and are simple to maintain, so they have been widely recognized and used in the field of industrial production.

The global Chain Combination Sling market size was estimated at USD 1405.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
