Report Overview

The chain feeding system is an automatic feeding equipment used for poultry breeding. It transports feed to the poultry feed basins or feed troughs through chains. This system usually consists of a series of chains, sprockets, conveyor troughs, feed basins or feed troughs, and driving devices. The main working principle of the chain feeding system is that the feed is placed in the conveyor trough, and then the feed is transported from the feed storage to the bird's feed basin or feed trough through the chain. Normally, the chain system will automatically operate at fixed time intervals to evenly deliver feed to each feed basin or feed trough according to preset amounts.
