Abstracts

The chain store operation system is a comprehensive management platform for multi-store businesses. It enables real-time data synchronization and hierarchical authority management between headquarters and branches through cloud or local deployment. The system integrates core modules such as product management, inventory transfer, membership operations, POS cashier, financial settlement, and data analysis. It supports access from 10 to 10,000 stores, can manage over 100,000 SKUs, and handle over a thousand inventory transfers per day. Payment methods include WeChat, Alipay, UnionPay, Stripe, and PayPal. The system can also connect to business systems such as ERP, CRM, and WMS through API interfaces. In terms of data analysis, the platform can track key indicators such as sales, inventory turnover, member repurchase rates, and store performance, helping companies achieve efficient and unified chain operation management. The overall gross profit margin of a chain store management system typically ranges from 60% to 85%, demonstrating strong profitability. In contrast, on-premises systems, due to the additional operational and upgrade costs, have slightly lower gross profit margins than cloud-based SaaS systems.

The global Chain Store Management System market size was estimated at USD 2770.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.00% during the forecast period.
