Report Overview:

A chainsaw (or chain saw) is a portable gasoline, electric, or battery powered saw which cuts with a set of teeth attached to a rotating chain driven along a guide bar. It is used in activities such as tree felling, limbing, bucking, pruning, cutting firebreaks in wildland fire suppression and harvesting of firewood.

A chainsaw has two main parts: a saw blade built into a chain, wrapped around a long metal guide bar, and a small, one-cylinder gasoline (petrol) engine (sometimes an electric motor powered by a cord or battery pack). The chain is a bit like a bicycle chain, running around sprockets (gear wheels designed to turn a chain) only with about 30 or so sharp teeth (made from a hardened steel alloy) mounted around it at intervals. Inside the engine, as the piston moves in and out of the cylinder, it pushes a connecting rod that turns a crankshaft. The crankshaft turns gears that are connected (through a centrifugal clutch, explained below) to one of the sprockets on which the chain is mounted—and the chain spins around.

Most manufacturers market chainsaw chains as chisel, semi-chisel, safety, full-skip, semi-skip or special purpose machines. Each type is used to cut different kinds of wood. The chisel type chain cuts faster than the other types of chains, but dulls faster. The semi-chisel type chain stays sharp longer than the chisel type and performs better in abrasive environments.

The Global Chainsaws Market Size was estimated at USD 1732.23 million in 2023 and is projected to reach USD 2117.04 million by 2029, exhibiting a CAGR of 3.40% during the forecast period.
