Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Chalcogenide Glass Lenses competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global chalcogenide glass lens production reached 1,140,000 units, with an average selling price of US\$376 per unit. Chalcogenide glass lenses are optical lenses made of amorphous glass materials primarily composed of chalcogen elements such as sulfur (S), selenium (Se), and tellurium (Te). They are often doped with elements such as arsenic (As), germanium (Ge), and gallium (Ga) to improve physical properties. They are widely used in security and military infrared thermal imagers, infrared targeting systems, drone and vehicle-mounted night vision systems, infrared sensors, gas monitoring, medical imaging, infrared spectroscopy analysis instruments, and optical communications. Chalcogenide glass boasts excellent infrared transmittance (covering 1-12 μ m and even extending into the far infrared), low dispersion, high nonlinear refractive index, and good processability, making it a key player in infrared optical imaging, thermal imaging, fiber optic communications, laser systems, and nonlinear optical devices. Globally, chalcogenide glass lenses are experiencing growth. Driving factors include the rapid adoption of infrared thermal imaging equipment in security and automotive ADAS, demand for military applications and drones, and increasing demand for mid-infrared optical components in medical and industrial inspection. The Asia-Pacific region (particularly China and Japan) is becoming a major production and consumption center for chalcogenide glass lenses, while North America and Europe maintain their dominance in high-end military and scientific research applications.

The global Chalcogenide Glass Lenses market size was estimated at USD 429.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.10%

during the forecast period.
