Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Chalcogenide Glass competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Chalcogenide glass is a kind of amorphous inorganic special glass with chalcogenide elements as main components and arsenic (As), germanium (Ge), antimony (Sb) and other elements introduced. Its core characteristics lie in its high transmittance, low luminous coefficient and excellent nonlinear optical properties in the middle and far infrared bands. Market Concentration and Key Players: Internationally, the market concentration of chalcogenide glass is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, Schott and Liebherr and other large manufacturers; from the domestic point of view, wind power pitch reducer manufacturers have Anhui Guangzhi Technology and Hubei Xinhua Information Materials and other enterprises. Manufacturing Processes and Market Trends: The manufacturing process of chalcogenide glass takes ultra-high vacuum melting as the core. It is necessary to prepare large size and high uniformity glass by vacuum low-temperature purification, high-temperature melting and leakage forming in an anhydrous and oxygen-free environment with pressure lower than 10 Pa. The purity of raw materials is required to reach 5N grade, and quartz ampoule packaging and precision molding technology are relied on to eliminate impurity absorption peaks. The market trend shows the integration of accelerated civilian substitution and technological innovation: its cost is lower than that of germanium single crystal, its refractive index temperature coefficient is low, and it is suitable for civilian fields such as automotive ADAS night vision and security monitoring; The technical direction focuses on arsenic-free environmental protection, multi-spectral transmission and microcrystalline strengthening. Meanwhile, China enterprises have made breakthroughs in international

standard formulation and precision molding mass production, but the high-end market still depends on German and Japanese enterprises, and it is necessary to cope with the fluctuation of raw materials and the cost pressure of environmental protection technological transformation.

The global Chalcogenide Glass market size was estimated at USD 118.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
