Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Chelating Agents for Detergents competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Chelating agents for detergents are chemical compounds used to bind and sequester metal ions (such as calcium, magnesium, iron, and manganese) that are commonly found in water. These metal ions can interfere with the effectiveness of detergents by reacting with the surfactants and reducing their cleaning power. By capturing these ions, chelating agents help to soften water, improve detergent performance, prevent soap scum and scaling, and enhance the stability and shelf life of the detergent formulations.

The global Chelating Agents for Detergents market size was estimated at USD 825.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
