### Report Overview

The last years have seen a growing number of businesses that were able to at least partly shift their business model from selling a product to selling a service. „Anything-as-a-service“, or XaaS – as this trend is often called – offers several advantages for customers- such as lower initial investment, predictable costs, zero hassle with maintenance of the product purchased, as well as for suppliers – like higher margins through additional selling of value-added services in the service package (e.g. insurance or maintenance), scale effects, and customer lock-in. Also in chemicals, like in some of the above mentioned industries, CaaS is not new and it has been explored in depth already, often in the form of chemical management services (e.g. the offerings of some big players like Dow, Quaker, PPG, or BASF who takeover most/all activities around chemicals for some customers, from application development according to customer requirements, to logistics, process development, chemical application, and waste management) or chemicals leasing.
