Report Overview

Adequate chemical defense equipment must encompass all areas of concern: detection and warning, personal protective equipment, decontamination and medical prophylaxis, and treatment. The primary item of protection is the personal respirator, designed to protect individuals against volatile agents and aerosols. The rapid detection and warning of an opponent's use of chemical agents is critical to the protection of forces. Real-time detection and warning, preferably from remote sensors, provides more time to assume a protective posture and to identify the chemical agent. Decontamination of equipment, facilities, and personnel is also required after an attack if effective military operations are to be maintained.
