Abstracts

Chemical sterilization equipment refers to devices or systems designed to sterilize objects, surfaces, or materials using chemical agents rather than physical methods like heat or radiation. These chemical agents are typically in the form of gases, liquids, or vapors, and they work by disrupting the cellular structures of microorganisms, rendering them incapable of reproduction or causing their death. Chemical sterilization is commonly used in medical facilities, laboratories, and industrial settings to ensure the complete elimination of pathogens, including bacteria, viruses, fungi, and spores, from equipment, instruments, and other items that cannot withstand high temperatures or other harsh sterilization methods. The core manufacturers in global Chemical Sterilization Equipment market are Steris, Getinge Group, Advanced Sterilization Products, 3M and Shinva Medical Instrument, etc, accounting for 47% market share.
