Abstracts

Seals used in the chemical transportation industry are majorly made from either polytetrafluoroethylene (PTFE) or perfluoroelastomer (FFKM) or ethylene propylene diene monomer (EPDM). These materials provide exceptional durability, excellent wear resistance, and outstanding chemical resistance against a wide range of chemicals. These seals are mainly used in the form of o-rings and gaskets in tankers to prevent any non-accidental releases (NARs) during the time of chemical transportation. Stringent regulations to prevent non-accidental releases of chemicals during the transportation is a factor assuring a healthy demand for seals in chemical transportation. Chemical is an important driver of this industry. Emerging economies, particularly in Asia and Latin America, are experiencing rapid industrialization, urbanization, and population growth. This drives the demand for bulk chemicals across various sectors, including construction, automotive, electronics, agriculture, and consumer goods. The rising middle class in these regions is also contributing to increased consumption of chemical products.

The global Chemical Transportation Seal market size was estimated at USD 1893.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
