Abstracts

Child-resistant closures (CRC) are special closures designed to prevent children from easily opening containers that contain potentially harmful substances, such as medicines, chemicals or cleaning products. These closures are designed with a safety mechanism that requires a specific action or series of actions to open the container, which most adults can do but is difficult for young children to understand or operate. The main purpose of child-resistant closures is to reduce the risk of accidental poisoning or ingestion by making it more difficult for children to access dangerous items.
