Abstracts

Children Rescue Cervical Collars are medical devices designed to provide support and immobilization to a child's neck in emergency situations where there is a suspected neck or cervical spine injury. Children Rescue Cervical Collars are similar in purpose to those used for adults but are specifically designed to fit the smaller anatomy of children. These collars are typically made from sturdy materials, such as plastic or foam, to provide adequate support. They may have cushioning on the inside to enhance the child's comfort. The primary purpose of a children's emergency cervical collar is to stabilize the cervical spine (neck) and restrict neck movement. They are used in situations where there is a potential risk of a neck injury, such as motor vehicle accidents, falls, or sports-related injuries, to maintain the neck in a neutral position until further assessment can be conducted.

The global Children Rescue Cervical Collars market size was estimated at USD 140.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
