Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Chilled Ceilings competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of cooled ceilings will reach 2.87 million square meters, with an average selling price of US\$145 per square meter. A chilled ceiling is a room air conditioning system that uses the ceiling as a heat and cold transfer surface. The core principle is to circulate chilled water through metal panels or embedded pipes installed in suspended or modular ceilings. Through radiation and some natural convection, the system absorbs heat from the interior, reducing the space temperature.

The global Chilled Ceilings market size was estimated at USD 416.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
