Abstracts

A chiller is a machine that removes heat from a liquid coolant via a vapor-compression, adsorption refrigeration, or absorption refrigeration cycles. This liquid can then be circulated through a heat exchanger to cool equipment, or another process stream (such as air or process water). They are used in a variety of applications to cool and dehumidify air or to cool process equipment, such as lasers, medical imaging machines, data centers, and manufacturing equipment. The global chillers market is experiencing steady growth, driven by increasing demand for climate control systems across commercial, industrial, and residential sectors. Chillers are essential for HVAC systems, process cooling in manufacturing, and data center temperature regulation. The market is significantly influenced by expanding construction activities, especially in Asia-Pacific, where rapid urbanization and infrastructure development in countries like China and India are boosting adoption. Technological advancements are reshaping the industry, with a strong shift toward energy-efficient and low-GWP refrigerant chillers. Manufacturers are focusing on innovations such as magnetic bearing compressors, smart controls, and variable speed technologies to enhance performance while meeting environmental regulations. The integration of IoT-based monitoring systems is becoming more common, offering predictive maintenance and operational optimization. In terms of segmentation, air-cooled chillers dominate the market due to their lower installation cost and space efficiency, especially in commercial buildings. However, water-cooled chillers maintain a strong foothold in large industrial and high-capacity applications. Data centers, food & beverage processing, pharmaceuticals, and chemicals are among the fastest-growing end-use industries for chillers. Looking forward, the global chillers market is expected to grow at a CAGR of around 4-5% over the next five years. Growth will be fueled by rising demand for cooling in hot climate zones, tightening energy efficiency regulations, and increasing investment in green building certifications like LEED. The focus will remain on sustainability, lifecycle cost

reduction, and smart infrastructure integration.

The global Chillers market size was estimated at USD 8426.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
