## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Chinese Medicine Injection for Tumor Diseases competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Chinese Medicine Injections for Tumor Diseases are sterile injectable formulations derived from traditional Chinese herbs with direct antitumor properties, such as inhibiting tumor cell proliferation, inducing apoptosis, and suppressing angiogenesis. Unlike traditional adjunctive therapies (e.g., Kang'ai Injection, Shenqi Fuzheng Injection), these injections focus on direct antitumor effects and are often used in specific cancer types as part of combination therapy regimens. Although some products have demonstrated clinical efficacy, their complex compositions and unclear mechanisms of action, coupled with a lack of high-quality clinical studies, have limited their widespread adoption. Therefore, further fundamental research and clinical trials are necessary to validate their safety and efficacy, promoting standardized and evidence-based development.

The global Chinese Medicine Injection for Tumor Diseases market size was estimated at USD 672.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
