Report Overview

Chip solid crystal conductive adhesive is a high conductivity and thermal conductivity adhesive containing fine silver powder, which can quickly cure at low temperatures, forming a strong bond and good electrical connection. Chip solid crystal conductive adhesive is mainly used for vertically structured LED chips, as it can achieve direct conductivity between the chip and the bracket without the need for additional wire bonding processes. The disadvantage of chip fixed crystal conductive adhesive is that it absorbs some light, reducing the brightness and efficiency of LEDs. Therefore, for horizontally structured LED chips, transparent insulation adhesive is usually used as the solid crystal adhesive.

The global Chip Die Bonding Conductive Adhesive market size was estimated at USD 385.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
