Abstracts

In the transmission system, noise is classified in two ways: one is differential mode noise and the other is common mode noise. Chip ferrite cores are used to clean differential mode noise generated from either the signal line or power line circuit. Chip ferrite cores are used to absorb high-frequency noise and transform it into heat, to filter out the unwanted signal (noise). Ferrite choke coils are one of the most efficient and simple filter types and are widely used in many areas of electronic equipment, which is the major driving factor for the market growth. Ferrite chokes are increasingly used in electronic equipment to reduce electromagnetic interference, and due to their many advantages, there is an increasing demand for wire wound ferrite chokes, military and aerospace systems and subsystems, electrical appliances, factories. Surging adoption of ferrite chokes in applications such as automation equipment and many other devices along with increasing use of ferrite chokes in the transportation and automotive industries is expected to improve the growth of the market over the forecast period.

The global Chip Ferrite Cores market size was estimated at USD 839.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
