Report Overview

Because ESL (residual inductance) and ESR (equivalent series resistance) are extremely small, the self-resonance frequency is high. In comparison with normal two-terminal capacitors, deep insertion loss characteristic is provided to the high frequency area. High capacitance 3-terminal capacitors can support protecting from low frequency ripple noise and high frequency noise (EMI) which normally requires the use several capacitors by one chip. Used for digital circuits of digital appliances, computers, automotive electronics, etc.

The global Chip Type Three Terminal Capacitors market size was estimated at USD 650.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
