Abstracts

Chiplet packaging technology represents a paradigm shift in semiconductor design and manufacturing, moving away from monolithic system-on-chip (SoC) architectures toward a modular approach where multiple smaller, specialized silicon dies known as chiplets are integrated into a single package using advanced interconnects. This technology enables heterogeneous integration, allowing manufacturers to combine dies produced with different process nodes, materials, or functions (e.g., processors, memory, I/O, analog) into a unified system, thereby improving yield, reducing costs, accelerating time-to-market, and overcoming the physical and economic limitations of traditional scaling.

The global Chiplet Packaging Technology market size was estimated at USD 1875.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 22.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Chiplet Packaging Technology market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
