Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Chiplets competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A chiplet is a tiny integrated circuit (IC) that contains a well-defined subset of functionality. It is designed to be combined with other chiplets on an interposer in a single package to create a complex component. Chiplet technology is rapidly driving innovation and change in the semiconductor industry, becoming one of the important paths to promote advanced packaging and heterogeneous integration. Its main market drivers include: First, the demand for performance and cost optimization. Chipsets can improve chip yield and reduce overall manufacturing costs through modular design, while accelerating product iteration; second, the technical bottleneck caused by the slowdown of Moore's Law. Chipsets allow the combination of multiple chips at different process nodes to improve system-level performance; third, the rapid growth in demand for AI, high-performance computing (HPC) and data centers has driven the desire for higher bandwidth and lower power consumption integration solutions. In addition, the gradual maturity of the chiplet ecosystem, such as the advancement of the UCIe standard, has also enhanced the feasibility of its industrial implementation. However, the market still faces many challenges, including: insufficient standardization and interoperability problems. Chipsets from different manufacturers lack a unified interface, which limits compatibility between modules; the complexity of design and testing increases, and system design needs to consider more factors such as thermal management and signal integrity; the supply chain is not yet sound, and it relies heavily on advanced packaging manufacturers and EDA tools; and the intellectual property protection and collaborative development model are not yet mature, hindering the open development of the ecosystem.

The global Chiplets market size was estimated at USD 2175.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 28.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Chiplets market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
