## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Chirped Pulse Compression Grating competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of pulse compression gratings will reach 28,000 units, with an average selling price of US\$10,000 per unit. A chirped pulse compression grating is a reflective or transmissive grating with a non-uniform periodic structure (chirp period) engraved on its surface. It is specifically designed to compensate for dispersion and compress ultrashort laser pulses. By precisely controlling the path difference when light of different wavelengths is reflected or diffracted on the grating, it achieves the function of stretching the pulse and then compressing it back to the ultrashort pulse width. It is widely used in CPA (chirped pulse amplification) technology in ultrafast laser systems, high-power laser physics experiments, laser micromachining, and optical communications. It is a key optical component for achieving high-power ultrashort pulse output.

The global Chirped Pulse Compression Grating market size was estimated at USD 280.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
