## Abstracts

Chlorinated polyethylene (PE-C) is an inexpensive variation of polyethylene having a chlorine content from 34 to 44%. It is used in blends with polyvinyl chloride (PVC) because the soft, rubbery chlorinated polyethylene is embedded in the PVC matrix, thereby increasing the impact resistance. In addition, it also increases the weather resistance. Furthermore, it is used for softening PVC foils, without risking plasticizer migration. Chlorinated polyethylene can be crosslinked peroxidically to form an elastomer which is used in cable and rubber industry. When chlorinated polyethylene is added to Others polyolefins, it reduces the flammability. Chlorinated polyethylene is sometimes used in power cords as an outer jacket. The Asia-Pacific region led the global chlorinated polyethylene market due to the increasing demand for chlorinated polyethylene from various end-use industries, such as building & construction, wires & cables, and automobiles, among Others. Growth in the Asia-Pacific chlorinated polyethylene market can also be attributed to the fact that China is the world leader in the production as well consumption of chlorinated polyethylene, followed by India.

The global Chlorinated Polyethylene market size was estimated at USD 474.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
