Abstracts

Chlorinated Polyolefin Heat Shrinkable Tube refers to a type of thermoplastic tube that undergoes a process of chlorination to enhance its properties. It is made from polyolefin materials, such as polyethylene or polypropylene, which are chemically treated with chlorine gas. This chlorination process modifies the polymer structure, resulting in a heat shrinkable tube with improved heat resistance, flame retardancy, chemical resistance, and mechanical strength. The tube can be heat-shrunk onto a component or wire by applying heat, causing it to shrink and tightly conform to the underlying surface, providing insulation, protection, and environmental sealing in various applications.

The global Chlorinated Polyolefin Heat Shrinkable Tubes market size was estimated at USD 420.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
