Report Overview

Chlorine Gas is still the most common and cost effective disinfection technology for water and wastewater treatment applications. Gas feeders equipment is now installed vacuum feed in lieu of pressure feed and is direct container mounted vs. remote mounted vacuum regulators. Chlorine gas under pressure is fed to the inlet pressure reducing valve, the needle of which is seated on a diaphragm. At the water end of the system, pressure differential is applied across a venturi by a boost flow which causes the venturi to suck.
