## Abstracts

Chlorogenic acid (CGA) is a natural chemical compound which is the ester of caffeic acid and (?) -quinic acid. It is an important biosynthetic intermediate. Chlorogenic acid is an important intermediate in lignin biosynthesis. This compound, known as an antioxidant, may also slow the release of glucose into the bloodstream after a meal. The term chlorogenic acids can also refer to a related family of esters of hydroxycinnamic acids (caffeic acid, ferulic acid and p-coumaric acid) with quinic acid. Chlorogenic Acid and other caffeoyl esters are among the most potent free radical scavengers found in plant tissues. Chlorogenic Acid has a very high alkyl peroxy radical scavenging activity. Compared to about eighteen other compounds, (including quercetin, gallic acid, alpha-tocopherol), chlorogenic acid was only second to rutin. According to literature reports, in particular, the inhibitory potency of chlorogenic acid on ONOO-scavenging (peroxynitrite radical) is considerable when compared with other metabolites, natural products or synthetic compounds. Chlorogenic Acid is therefore a natural antioxidant with potential applications in antiaging compositions and in compositions that provide active protection against oxidation, and damage by free radicals.

The global Chlorogenic Acid market size was estimated at USD 150.47 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.
