Report Overview

Sodium dichloroisocyanurate (NaDCC) and trichloroisocyanuric acid (TCCA) are widely used chlorine-based disinfectants in water treatment, swimming pool sanitation, industrial sterilization, and other hygiene-related applications. Both compounds have high available chlorine content and release hypochlorous acid (HOCl) in water, effectively eliminating bacteria and viruses. Additionally, they contain cyanuric acid (CYA) structures, which help stabilize chlorine in outdoor conditions by reducing ultraviolet (UV) degradation.

The Trichloroisocyanuric Acid Market size was valued at USD 1241.24 million in 2024 and is expected to reach USD 1662.52 million by 2033, growing at a CAGR of 3.3% from 2025 to 2033. driven by rising demand for clean and safe water, increased urbanization, and stricter regulations on water quality and sanitation. In addition, growing awareness of hygiene and public health, particularly in emerging economies, is fueling the adoption of chlorine-based disinfectants. At the same time, industrial expansion in sectors such as food and beverage, pharmaceuticals, and wastewater treatment is creating additional demand for TCCA and NaDCC. Moreover, technological improvements in the formulation of tablets and granules enhance product convenience and effectiveness, further supporting market growth.

The global Chloroisocyanurates (TCCA and NaDCC) market size was estimated at USD XX million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of XX% during the forecast period.
