## Abstracts

Chlorophyll A grinder is a device specially used for grinding and extracting chlorophyll A from plant tissues. The main function of the chlorophyll A grinder is to quickly and evenly grind plant tissues containing chlorophyll A (such as algae, aquatic plants, etc.) into fine particles by mechanical crushing, thereby releasing chlorophyll A for subsequent extraction and analysis. The working principle of the chlorophyll A grinder is usually to mechanically crush the sample by high-speed rotating grinding balls or grinding rods. During the grinding process, the sample is placed in a grinding container, and the high-speed rotating grinding element repeatedly impacts and shears, so that the cell wall in the sample is broken and chlorophyll A is released.

The global Chlorophyll A Grinder market size was estimated at USD 327.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
