Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Chloropyridines competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Chloropyridines are a family of pyridine-ring compounds in which one or more ring hydrogens are replaced by chlorine. The simplest members are the monohalogenated isomers with formula C_5H_4ClN , namely 2-chloropyridine, 3-chloropyridine and 4-chloropyridine, which are colorless to pale-yellow liquids, basic like pyridine but with a more electron-deficient ring because of the $C-Cl$ substituent. In industry, chloropyridines are mainly produced by chlorinating pyridine or picoline feeds with chlorine or oxychlorination systems, sometimes via pyridine-N-oxides. A typical example is gas-phase chlorination of pyridine to give 2-chloropyridine and then 2,6-dichloropyridine, or preparation of 2-chloropyridine from pyridine-N-oxide using phosphoryl chloride or related chlorinating agents. Thus the upstream raw materials include pyridine, chlorine or other chlorinating agents, catalysts and organic solvents. Because the $C-Cl$ bond on an electron-poor pyridine ring is a good leaving group, chloropyridines are highly valued as versatile electrophilic building blocks. They are key intermediates in the synthesis of modern herbicides, fungicides and insecticides, and are also used to build active pharmaceutical ingredients such as antihistamines and antiarrhythmic drugs; in addition, they feed into biocides (such as pyriithione-based systems), dyes and other specialty chemicals. In 2024, global sales of chloropyridines reached approximately 223 K tons, with an average global market price of around US\$ 3,816/ton. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 10% to 30%.

The global Chloropyridines market size was estimated at USD 853.0 million in 2025 and

is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
