The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CHO Dry Powder Feeds competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. CHO dry powder feeds are concentrated, shelf-stable nutrient formulations designed to support the growth and productivity of Chinese Hamster Ovary (CHO) cells in biopharmaceutical manufacturing. These feeds are typically added to the culture medium during fed-batch or perfusion processes to maintain optimal nutrient levels, prolong cell viability, and maximize recombinant protein expression, especially for monoclonal antibodies and other therapeutic proteins. Dry powder feeds offer advantages in long-term storage, transport, and scalability. They are chemically defined and serum-free, and contain a precise blend of amino acids, vitamins, trace elements, carbohydrates, and growth-promoting factors. Users reconstitute the powder into a liquid feed before use, allowing for flexible concentration adjustments. CHO dry powder feeds are widely used in both R&D and GMP-compliant production.

The global CHO Dry Powder Feeds market size was estimated at USD 304.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
