Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CHO Feeds competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. CHO Feeds are specialized nutrient supplements designed for Chinese Hamster Ovary (CHO) cells, widely used in the biopharmaceutical industry for the production of monoclonal antibodies, recombinant proteins, and vaccines. These feeds support high-density cell growth and sustained protein expression in bioreactors or laboratory culture systems. Since CHO cells are a gold standard in biologics manufacturing, the quality and composition of CHO feeds are critical for ensuring consistent yield and product quality. CHO feeds are typically serum-free and chemically defined, meaning they contain precisely known ingredients such as amino acids, vitamins, sugars, trace elements, and buffering agents. They are used alongside a basal medium and added periodically in fed-batch or continuously in perfusion culture processes. The feed formulation can be tailored to specific CHO cell lines or production goals to enhance productivity and cell viability.

The global CHO Feeds market size was estimated at USD 498.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
