Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CHO Liquid Feeds competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. CHO Liquid Feeds are nutrient-rich, ready-to-use liquid supplements formulated to support the high-density growth and productivity of CHO (Chinese Hamster Ovary) cells in biopharmaceutical production. Unlike powdered feeds that require reconstitution, liquid feeds offer convenience, consistency, and reduced preparation error, making them ideal for large-scale, GMP-compliant manufacturing environments. These feeds are designed to be added at specific intervals during fed-batch or perfusion culture processes to maintain optimal nutrient levels throughout the production run. Typically, CHO liquid feeds contain a balanced mix of amino acids, vitamins, glucose or other carbon sources, trace elements, and sometimes growth-promoting additives. They are chemically defined and serum-free, which helps minimize variability and improve downstream purification efficiency. Custom liquid feed formulations can also be developed to suit specific CHO cell clones or target protein types, allowing for improved titer and product quality.

The global CHO Liquid Feeds market size was estimated at USD 326.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
