Report Overview

The cholesterol lowering biologic drugs offers a new, revolutionary alternative for people fighting with cholesterol with the same old treatments. The old method of treating cholesterol elevated levels includes a change in diet and consuming statin pills to prevent the body from making more bad cholesterol. The new class of PCSK-9 inhibitors is being approved by the FDA which works by helping the liver flush out the bad cholesterol instead of preventing the body from making low-density lipoproteins. The FDA has till now approved only two drugs Praluent and Repatha, both made from living things. The PCSK-9 is a protein which binds to the receptors, those which are responsible for getting the bad cholesterol out of the body.
