Abstracts

Cholesterol is a type of lipid molecule, which is biosynthesized by all animal cells as it is an essential structural component of the cells. Cholesterol management devices are used to determine a lipoprotein profile and to measure total cholesterol content, high-density lipoprotein (HOL), low-density lipoprotein (LDL), triglycerides, and other fatty substances found in the human body. The global cholesterol management devices market is driven by increasing obese and overweight population base. According to the World Health Organization (2014), worldwide, more than 1.9 billion adults over 18 years were overweight of which over 600 million were obese. Less physical activity due to the desk-bound nature of many forms of work, changing modes of transportation, government support for the research and development, and increasing urbanization have fueled the growth of the market. However, lack of awareness among the people may slow the growth of the market.

The global Cholesterol Management Devices market size was estimated at USD 1788.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
