## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Choline Glycerophosphate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Choline Glycerophosphate production was approximately 1200 tons, with an average selling price of about US\$40/kg. Single-line production capacity was approximately 100 tons/year, with an average gross profit margin of about 20-25%. Choline Glycerophosphate is a naturally occurring water-soluble phospholipid precursor and neurotransmitter in the human body, composed of glycerol, phosphate, and choline. It can cross the blood-brain barrier and is an important raw material for the synthesis of the neurotransmitter acetylcholine and cell membrane phospholipids, thus playing a crucial role in brain and nervous system function. Its main applications include improving memory and cognitive abilities, and assisting in the treatment of Alzheimer's disease and related diseases. The upstream raw material for Choline Glycerophosphate mainly comes from phosphatidylcholine extracted from natural soybeans or egg yolks, which is then chemically synthesized and purified to obtain the final product. Its downstream applications are concentrated in two major areas: pharmaceuticals and health supplements. In the pharmaceutical industry, it is used to treat neurodegenerative diseases such as Alzheimer's disease and post-stroke cognitive impairment; in the health supplement industry, it is mainly used as a functional ingredient to improve brain function, cognitive function, and motor performance.

The global Choline Glycerophosphate market size was estimated at USD 48.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
