Abstracts

Chondroitin sulfate sodium is a sulfated glycosaminoglycan (GAG) derived primarily from animal cartilage, most commonly bovine, porcine, or avian sources, and is widely recognized for its role in maintaining the structural integrity and elasticity of connective tissues such as cartilage, tendons, and ligaments. As a key ingredient in dietary supplements and pharmaceutical formulations, it is predominantly used to support joint health, alleviate symptoms of osteoarthritis, and promote overall musculoskeletal function, often in combination with other compounds like glucosamine. Its molecular structure, characterized by alternating units of glucuronic acid and N-acetylgalactosamine with variable sulfation patterns, underpins its biological activity, including water retention in cartilage, inhibition of degradative enzymes, and anti-inflammatory properties.

The global Chondroitin Sulfate Sodium market size was estimated at USD 1498.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
