Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Chopped Carbon Fiber competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Chopped carbon fiber refers to continuous carbon fiber filaments that are mechanically cut into short fibers of predetermined lengths (commonly 3mm, 6mm, 12mm, etc.). These fibers retain the excellent mechanical properties of carbon fibers, such as high specific strength, high specific modulus, corrosion resistance, and thermal stability, while also offering good processability and dispersion characteristics. Chopped carbon fibers are widely used to reinforce thermoplastic and thermosetting resin matrices, enhancing the strength, stiffness, electrical conductivity, and wear resistance of products in industries such as automotive, electronics and electrical. In recent years, the chopped carbon fiber market has shown the following trends: The market scale continues to expand: driven by the growth of demand in downstream industries, the scale of the chopped carbon fiber industry will maintain a rapid growth state, and the scale of the Chinese market will continue to expand. Technological progress: Technological evolution is mainly focused on fiber surface active treatment technology, size distribution control, pre-impregnated chopped fiber preparation and other directions to improve the interface bonding and mechanical properties of composite materials. Thermoplasticization trend is significant: Thermoplastic matrix (such as PPS, PA, PEEK) with chopped carbon fiber has become a key growth point, suitable for rapid injection molding and large-scale application scenarios, and is the technical focus of future product competition. Penetration into high value-added scenarios: Applications are transforming from low-end and mid-end structural parts to electromagnetic shielding components, thermal conductive modules, smart terminal components, and key parts of automotive structures, promoting chopped carbon fiber from a single reinforcement

function to "multifunctional composite reinforcement materials". The vertical integration of the industrial chain is accelerating: Leading companies are deploying upstream raw silk supply, while extending downstream to composite parts, gradually building an integrated industrial chain of "raw silk-chopped-composite-terminal application" to enhance product added value.

The global Chopped Carbon Fiber market size was estimated at USD 432.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.00% during the forecast period.
