Report Overview

Color pigments are broadly classified in two segments: organic and inorganic color pigments. The market for inorganic color pigments is further divided based on their source as iron oxide, cadmium based pigments, chrome pigments and several others. Chrome pigments are largely derived from lead compounds and have a range of properties such as high color strength, high solubility, highly concentrated and non reactive making chrome pigments apposite for applications such as paints and coatings, inks, plastics, rubber, detergents and soaps, ceramics and polishes. The market for chrome pigments was initially dominated by North America and other developed regions; however there is shift in global trend largely due to increased environmental regulations over inorganic pigments. The current market for chrome pigments is largely dominated by China followed by North America and other countries across globe. Countries present in Asia Pacific such as India, Indonesia and Vietnam are expected to have a stable or upward trend for chrome pigments principally due to the low cost of chrome pigments and non-stringent environmental regulations in the region.
