Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Chromium-free Passivation Solution competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Chromium-free Passivation Solution production reached approximately 191.5 k ton, with an average global market price of around US\$ 2937 per ton. A chromium-free passivation solution is a novel metal surface treatment chemical that is free from chromium substances, such as hexavalent chromium (Cr^{VI}) or trivalent chromium (Cr^{III}). It is used to replace traditional chromate conversion coatings by forming a dense protective conversion film on metals (e.g., galvanized steel, aluminum alloy, magnesium alloy). Its core components typically include environmentally friendly compounds like molybdates, zirconates, titanates, silanes, rare earth metal salts, or organic polymers. This conversion film effectively isolates the metal substrate from corrosive media, provides excellent corrosion resistance, and serves as a base for painting, meeting the stringent requirements of modern industry for environmental protection, health, and safety (EHS). The single line production capacity of Chromium-free Passivation Solution is about 5000 tons, and the industry gross profit margin is approximately 22% -30%.

The global Chromium-free Passivation Solution market size was estimated at USD 563.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
