Abstracts

Chronic migraine treatment encompasses a range of pharmaceutical and non-pharmacological interventions specifically designed for patients experiencing headaches on 15 or more days per month, with at least eight of those days meeting criteria for migraine. This condition is distinct from episodic migraine in terms of its frequency, disability burden, and treatment approach, often requiring a combination of acute therapies for immediate symptom relief and preventive strategies to reduce attack frequency, severity, and duration. Treatments include conventional oral preventives such as beta-blockers or antiepileptics, newer targeted monoclonal antibodies (CGRP inhibitors), onabotulinumtoxinA injections, neuromodulation devices, and behavioral therapies, all aimed at improving quality of life and reducing reliance on acute medications that can lead to medication-overuse headache.

The global Chronic Migraine Treatment market size was estimated at USD 3265.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
