Abstracts

Chronic pain treatment drugs encompass a broad range of pharmaceutical products designed to manage persistent pain lasting more than 12 weeks, including nonsteroidal anti-inflammatory drugs (NSAIDs), opioids, anticonvulsants, antidepressants, corticosteroids, and newer biologic agents targeting specific pain pathways. The market is characterized by a high degree of segmentation based on pain etiology?such as neuropathic, musculoskeletal, or cancer-related pain?and mechanisms of action, with growing emphasis on non-opioid alternatives due to safety concerns and regulatory pressures. Key drivers include an aging global population, rising prevalence of chronic conditions like osteoarthritis and diabetic neuropathy, increased healthcare spending, and advancements in personalized medicine approaches. However, the market faces challenges such as opioid addiction crises, stringent regulatory frameworks, patent expirations of blockbuster drugs, and the high cost of developing novel therapeutics. Emerging trends include the development of neuromodulators, cannabinoid-based medicines, and digital therapeutics integrated with pharmacological treatments, reflecting a shift toward multimodal and patient-specific pain management strategies.

The global Chronic Pain Treatment Drug market size was estimated at USD 8500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
