Report Overview

A cigarette is a small cylinder of finely cut tobacco leaves rolled in thin paper for smoking. The cigarette is ignited at one end and allowed to smoulder; its smoke is inhaled from the other end, which is held in or to the mouth; in some cases, a cigarette holder may be used, as well. Most modern manufactured cigarettes are filtered and also include reconstituted tobacco and other additives.

The term cigarette, as commonly used, refers to a tobacco cigarette, but can apply to similar devices containing other substances, such as cloves or cannabis. A cigarette is distinguished from a cigar by its smaller size, use of processed leaf, and paper wrapping, which is normally white, though other colors and flavors are also available. Cigars are typically composed entirely of whole-leaf tobacco.

Over the last decade, the international cigarette market has been dominated by five companies, China National Tobacco Corporation, Philip Morris International, British American Tobacco, Japan Tobacco International and Imperial Tobacco. For now, China National Tobacco Corporation (CNTC) is the world's single largest producer of cigarettes with 42% of the global market. The five largest cigarette consuming nations?China, Russia, U.S., Japan and Indonesia?account for 62% of the volume of all cigarettes sold. Six of the ten largest cigarette markets were emerging markets, three of which are Asian Pacific countries.

The Global Cigarette Market Size was estimated at USD 104424.74 million in 2021 and is projected to reach USD 106642.18 million by 2028, exhibiting a CAGR of 0.30% during the forecast period.
