Abstracts

Ciprofloxacin Injection is a broad-spectrum antibiotic belonging to the fluoroquinolone class, primarily used to treat a variety of infections caused by susceptible bacteria, including respiratory infections, urinary tract infections, gastrointestinal infections, and skin and soft tissue infections. Its mechanism of action involves inhibiting bacterial DNA gyrase and topoisomerase IV, interfering with bacterial DNA replication and repair, thereby inhibiting bacterial growth and reproduction. Ciprofloxacin Injection is typically administered intravenously, making it suitable for patients who cannot take oral medication or require rapid therapeutic effect. Common side effects include gastrointestinal discomfort, headaches, allergic reactions, and possible electrocardiogram abnormalities. Long-term use requires careful monitoring of liver and kidney function.

The global Ciprofloxacin Injection market size was estimated at USD 124.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
