Abstracts

CircRNA Sequencing Service is a specialized high-throughput sequencing solution designed to identify and analyze circular RNAs (circRNAs), a class of non-coding RNAs with covalently closed loop structures formed by back-splicing. Lacking poly-A tails and exhibiting high stability, circRNAs are abundant in eukaryotic transcriptomes and play significant roles in gene regulation and disease development. This service typically involves pre-treatment steps such as rRNA depletion and RNase R digestion to enrich circRNAs, followed by sequencing using Illumina or long-read platforms. CircRNA sequencing is widely applied in oncology, neurodegenerative diseases, cardiovascular research, and stem cell studies, offering insights into novel biomarkers and molecular mechanisms, and serving as a crucial tool in non-coding RNA research and translational medicine.

The global CircRNA Sequencing Service market size was estimated at USD 622.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global CircRNA Sequencing Service market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
