Abstracts

Cis 1,4 Polyisoprene Rubber is a synthetic elastomer characterized by a molecular structure in which the isoprene units are predominantly arranged in a cis-1,4 configuration, closely mimicking the chemical and physical properties of natural rubber. It exhibits high tensile strength, excellent resilience, low hysteresis, and superior elasticity, making it suitable for applications requiring high purity, consistent performance, and resistance to wear and tear. This synthetic alternative is often preferred in industries where natural rubber variability, allergen concerns, or supply chain limitations pose challenges, and it is commonly used in medical devices (such as surgical gloves and catheters), high-performance tires, adhesives, and various molded rubber products due to its biocompatibility, low levels of extractables, and reliable mechanical behavior.

The global Cis 1,4 Polyisoprene Rubber market size was estimated at USD 710.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Cis 1,4 Polyisoprene Rubber market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
