Abstracts

Cis-butenedioic anhydride, more commonly known as maleic anhydride, is an organic compound with the formula $C_4H_2O_3$, characterized by its white crystalline form and acrid odor, and it is industrially produced primarily through the oxidation of benzene or butane. It serves as a crucial chemical intermediate in the synthesis of unsaturated polyester resins (UPR), which are extensively used in the construction, automotive, and marine industries for producing fiberglass-reinforced plastics, as well as in the manufacture of lubricant additives, agricultural chemicals, and copolymers such as maleic anhydride grafted polyolefins. Its reactivity, owing to the presence of a double bond and an anhydride functional group, allows it to undergo various reactions including esterification, hydrolysis, and Diels-Alder additions, making it a versatile building block for specialty chemicals including fumaric and malic acids, and it is also employed in the production of food additives, pharmaceuticals, and surfactants.

The global Cis Butenedioic Anhydride market size was estimated at USD 320.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
