## Abstracts

CISM (Contact Image Sensor Module) is a type of imaging technology that captures visual information by direct contact with the surface being scanned. Unlike traditional scanners that use moving light sources, CISM uses an array of tiny sensors, usually in the form of a linear image sensor, to capture images directly from the surface of the object being scanned. This type of module is commonly used in compact scanners, document scanners, and optical character recognition (OCR) systems. The direct contact design allows for a slim, lightweight module that can be integrated into devices with limited space, such as handheld or portable scanners.

The global Cism Contact Image Sensor Module market size was estimated at USD 696.47 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
