Report Overview

Citizens band radio, also called CB Radio, a two-way radio system for short-range radio voice communication, used chiefly by private individuals in motor vehicles, homes, offices, and other locations where wireless telephone service is unavailable. A typical CB radio consists of a combined transmitter-receiver (a transceiver) and an antenna. In the United States 40 channels, at frequencies from 26.965 to 27.225 megahertz or in the UHF range of 460 to 470 megahertz, have been allocated to CB radio. A federal limitation of power (4 watts) and practical limitations of antenna height restrict the range of CB radios in motor vehicles to about 25 km (15 miles) and those in fixed locations to no more than 50 km (30 miles).

The global Citizen Band Radio market size was estimated at USD 189.80 million in 2023 and is projected to reach USD 137.73 million by 2032, exhibiting a CAGR of -0.04 during the forecast period.

North America Citizen Band Radio market size was estimated at USD 46.53 million in 2023, at a CAGR of -0.03 during the forecast period of 2024 through 2032.
