Report Overview:

Citizens band radio, also called CB Radio, a two-way radio system for short-range radio voice communication, used chiefly by private individuals in motor vehicles, homes, offices, and other locations where wireless telephone service is unavailable. A typical CB radio consists of a combined transmitter-receiver (a transceiver) and an antenna. In the United States 40 channels, at frequencies from 26.965 to 27.225 megahertz or in the UHF range of 460 to 470 megahertz, have been allocated to CB radio.
